Milk prices monitoring

November

ASSOCIATION OF DAIRY PRODUCERS

ANALYTICAL DEPARTMENT OF MILKUA.INFO

Growth is fixed at 25 kopecks on average. In this case extra-grade milk price has risen by 25 kopecks, up to 11.97 UAH/kg, higher and the first grades — by 23 kopecks, up to 11.52 and 10.93 UAH/kg, respectively. The growth of the average weighted price of three varieties is 24 kopecks — 11.47 UAH/kg.

This seems to be the last significant price increase this year. Further growth of average prices will look more inertial, which will be supported by those participants who will change prices in accordance with the already established market price. The situation is not easy, taking into account that introduction of total lockdown in the near future looks like an objective reality, not a probability.
